ARM-T02

Features you need, Prices you want.

Ultimate Gimbal Support

The Armor-Man 2 is designed to work with leading 3-Axis gimbal stabilizers such as the Tilta Gravity, DJI Ronin, and the Freely Movi. The Armor-Man 2 is capable of supporting a wide range of gimbal camera set ups.

Quick Release Arms

With an innovated quick-release system, each support arm is quickly snapped into the support vest. Each arm features two spring-loaded support sections. The tension of each spring section can be adjusted through knobs located along each joint. When not in use, each arm can be swiveled down into a resting position by simply pulling on the release cord and locking each arm into place along the hips of the operator.

Swivel Hand Grip Support

Adjustable swivel hand grip supports are located at the end of each arm. Each gimbal hand grip rests inside the support, allowing the operator to keep their arms free for any hands-on camera adjustments. They also provide support without limiting the operator's range of movement.

Integrated Battery Plate

The vest comes standard with a V-Mount battery plate, with a 4-Pin (female) LEMO power connection socket. Through here the operator can run power directly to the gimbal through the right support arm, which features several cable clamps. *The Armor-Man 2 is available in Gold Mount through special order.*

Custom-Cut Foam Hard Case

The Armor-Man 2 comes protected inside a custom-cut weatherproof travel hard case with a retractable handle, a pair of wheels, and 4 quick-release latches.
