

# ELE-FGL

## The ikan Fingerling

You've Got the Touch

Now you can be hands on while going hands off with ikan's new Elements Fly Series configuration...the ikan Fingerling. With one touch of a finger you can manipulate any light weight lens for more personal control of your DSLR rig. This versatile tool will quickly become a valuable addition to your HD shooting arsenal. Whether on location or in the studio, the ikan Elements Fingerling offers a simple shooting solution for any situation.

Because the entire Elements line is completely modular, the Fingerling is just the beginning. You can add and subtract new parts and over time, have a completely different configuration to do just about anything. Once you've started assembling a collection of Elements components as a part of your standard production field kit, the Fingerling will be just one of the many configurations and parts you'll be capable of assembling. And as the newest kits from the ikan Elements continue to roll out, you can always upgrade your rig to a newer configuration.
