Sony Alpha Handheld Camera Cage Rig with Active Cooling System (Tilta)

ONE SHEET

Overview

Tilta introduces a new addition to its family of professional camera cages: the ES-T27. Custom designed specifically for use with the Sony a6 series of cameras (a6000, a6300, and a6500), the ES-T27 maintains the sleek design, professional build, and uncompromising machining quality typical of Tilta products while introducing several never-before-seen cage features that will surely astound current and future A6 series shooters. First and foremost, Tilta has provided a solution to chronic overheating, a well-known weak spot of the A6 camera line. To prevent the mercury from rising, the ES-T27 includes an active (powered) cooling system, driven by a quiet electric fan and multiple heat-sync modules. Next on the features list is a first for Tilta: the inclusion of mechanical control buttons designed to mesh seamlessly with the underlying controls of the receiving camera. This unique button design enables Tilta to provide superior wraparound protection to the camera's body without obstructing controls that are necessary to access. Taking a nod from prior cages in the Tilta line, the ES-T27 features access to the battery door and cable jacks, a 15mm light-weight support baseplate mount, lens adapter stabilizing mounts compatible with most Metabones EF to E and PL to E adapters, an integrated 15mm rail system, and an optional furniture grade Rosewood grip/shutter control. (Purchased Separately)

*Wooden Handle available with ES-T27-A Version.
