

ID 400

The ikan ID 400

Kit Includes

ID-400 lighting unit, Light Stand Adapter, remote control, and one set of tungsten flood bulbs.

The difference between a great production and a mediocre production is lighting. No matter how great your camera is, if the lighting isn't sufficient, it can ruin your video. What if you don't have a crew and you're on a budget? That's why ikan designed a light for special events and remote locations, the ID-400 ENG-style, remote-controlled lighting unit.

Portable Power

In addition to standard AC power, the ID-400 can also be powered by optional Professional Battery Packs, using the Professional Battery Plates.

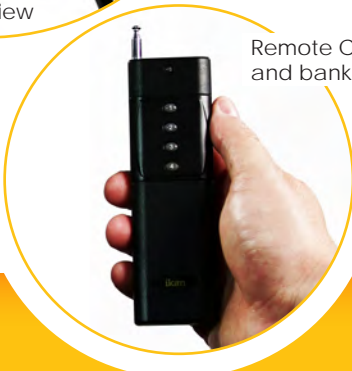

Remote Control

Every ID-400 comes standard with a programmable RF remote control with three channels and a range of well over 500 feet. This gives you the control to cue your lights without assistance.
