17" 3G- SDI Monitor QUICKSTART GUIDE

- ① Power Switch
Power ON / OFF
- ② F1 to F4 Buttons
User Programmable Function Buttons
For quick access, the user may program the F1 to F4 buttons to enable frequently accessed monitor features. Via the main monitor configuration menu, either button may be assigned to perform the following functions: Window 1, Window 2, HV delay, Blue Gun, and Pixel to Pixel, .
- ③ HD-SDI Selection Switch
Serial Digital Interface input & output (HD/SD compatible)
- ④ HDMI Selection Switch
High-Definition Multimedia Interface input & output
- ⑤ DVI Selection Switch
Digital Visual Interface input
- ⑥ YUV Selection Switch
Analog Component or RGB input & output
- ⑦ Y/C Selection Switch
S-Video input & output
- ⑧ VIDEO Selection Switch
Composite input & output
- ⑨ EXIT Button
In MENU, it is to exit the menu.
- ⑩ MENU Knob
It is to display menu, select settings, and adjustments.
(Push the knob to select, turn the knob to adjust settings.)

17" 3G- SDI Monitor QUICKSTART GUIDE

- ① HD-SDI Input & Output BNC Connection
- ② YPbPr - Component Input & Output BNC Connection
- ③ Y/C - S-Video Input & Output BNC Connection
- ④ VIDEO - Composite Input & Output BNC Connection
- ⑤ DVI Connection
- ⑥ HDMI Input & Output Connection
- ⑦ DC 12V-20V power terminal
XLR DC Connection
- ⑧ DC 12V-20V power terminal
Standard DC Connection
- ⑨ DIP Switch
Enable special 720p modes. For the monitor to correctly display certain 720p signals, it is necessary to configure the DIP switches.
- ⑩ TALLY
 - Do not provide power to tally connections.
 - Tally light system is unpowered and works by closing the contact between any of the grounding pins and the pin for the desired LED color.
- ⑪ Vesa 100mm Mount Holes
Threaded for M4x.07 screws. Use to attach Pro Battery Plate adapter.

DESCRIPTION OF FEATURES

Guides > Crosshair

Display a crosshair on the center of screen.

System Configuration > Menu Setup > User 1 - User 5

This function recalls user defined values settings .The user setting will remain in memory indefinitely and can be erased by using the reset option in the main menu.

DSLR Autoscaling

This function will allow users to extend their DSLR camera's HDMI video output any option of four – Normal, 3:2, 16:9 or Full Screen – convenience made simple.

Color Temperature > Manual > RGB Setup

Allows you to manually control the red, blue, and green channels from 0 - 255.

Function Setup > Luma Under Warn / Luma Over Warn

Adjustable Under Exposure and Over Exposed Warning feature gives the operator full control of the False Color brightness values. By setting the preferred IRE exposure limits, the operator is warned when the image exposure is exceeding or falling under the preset IRE limit, providing customizable, full image exposure control.

Function Setup > Peaking

This is equipped with Monochrome Peaking features which highlight the desired focus area in a bright, red outline. The operator adjusts the focus control until the red indicator outlines on the desired area are razor sharp, indicating optimal focus. For the best results, be sure the subject is properly exposed.

Function Setup > False Color

The False Color feature utilizes a full spectrum of assigned color indicators, ensuring flawless shot exposure. As the camera Iris is adjusted, the subject of the image will change color based on specific brightness values indicating optimal exposure. See included chart for color assignments.

Function Setup > Clip Guide

This adjustable upper Clip Guide levels to accurately display overexposed images in any shooting condition. The operator simply assigns the upper IRE to their preference and any exposure over the set IRE limit will flash in a vivid purple, indicating only the over exposed area.

Function Setup > Check Field

Allows to see the image in monochrome or only the red, blue, or green channels.

Function Setup > Pixel

A signal of any other resolution is scaled to fit this native resolution. There may be time when it is desired to view the incoming signal without scaling. Enabling Pixel to Pixel mode turns off the scaling and displays a 1440 x 900 pixel window of the original image. Each pixel of the panel displays one pixel of the original image. The user may use the scroll wheel on top of the monitor to move the window left, right. Push the scroll wheel again to toggle up and down.
